Claims 5-29 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-29 have not been further treated on the merits.

Applicant must prepare a proper IDS for all references cited in any and all foreign prosecutions as well as to keep the examiner informed about any allowed or rejected claims in those foreign prosecutions and what the basis of any rejection is (i.e. what references were used and how the foreign examiner applied those references). Copies of any allowed claims (in English) are required, as well.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the phrase “means for producing a pulsed air flow” (emphasis supplied) as a description of a conventional fan or blower 22 is not deemed to be descriptive. These air flows are generally continuous. If applicant agrees, please change “a pulsed” to - - an - - and make other changes necessary to be consistent with the above. It is also unclear in claim 1 what the overall combination being claimed is. Is

the vehicle or its passenger compartment part of the claimed combination or not? Note that functional language regarding intended placement in a structure that is not part of the claimed combination will be treated in accordance with MPEP 2114 and will be extended little patentable weight.

Claims 3 and 4 are vague as to what the overall combination being claimed is. Is the vehicle part of the claimed combination or not? Assuming that the vehicle is part of the claimed combination, it is also unclear in these claims which direction is the transverse direction of the vehicle and which direction is the longitudinal direction of the vehicle. Vehicles are three dimensional objects. How are these axes (x, y and presumably z) oriented relative to identifiable vehicle structure?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 2,049,159.

A ventilation module 3 is shown. A heating module 1 is shown. Heat exchangers (8, 9 and 9a) are shown. Side outlets 18, 15 and 16 are shown in Figure 4 to which corresponding distribution means (27, 20 and 21) are connected. Regarding claim 2, see side outlets 18 in Figure 4, in particular. Regarding claims 3 and 4, given the indefiniteness described in the rejection above, the examiner takes the position that regardless of whether one is viewing the device shown in Figure 4 of GB '159 in the front-back direction or the left-right direction of the vehicle, the ventilation module 3 is placed next to the heating module 1 as shown in Figures 1-4 of the reference.
